

Professional Cleaning Sector Laundry

Thinking of you

 **Electrolux**

Never stop thinking

When we say we are thinking of you, we really mean it. We do everything we can in order to understand market trends and to anticipate your needs and the problems you want solved. We do not design for design's sake, but for your sake. We devote our time, our know-how and our insight to developing appliances that will make you say, "This is exactly what I wanted! How did you know?" The answer is simple: because we were thinking of you when we made it.

Today, people are concerned about climate change, and – just like you – we want to make a difference. Electrolux takes a broad approach to the environment, which includes setting criteria for products in terms of low electricity, water and gas consumption, without compromising on functionality and performance.

GREEN RANGE

At Electrolux, we also maintain high environmental and ethical standards at our facilities and for our suppliers – no matter where in the world they are located.

We have a long-standing good reputation for our work with the environment and corporate responsibility. We have been recognized as being at the cutting-edge in the development of energy and water efficient products.

Electrolux. Thinking of you.

To us, it is natural to focus on environmental and safety considerations. Our production units are certified in accordance with the ISO 9001 (Quality) and ISO 14001 (Environmental Management) standards, and our products are CE and S-labelled.

With our Rational Floor Cleaning concept you save time and money – with a cleaner result!

High demands are placed on the cleaning of workplaces, schools, hospitals and the like, and the associated costs are often appreciable. Cleaning work is generally considered to be a strain, but it does not have to be so.

Our Rational Floor Cleaning concept is based on the fact that there are clear benefits for those who clean with moist or dry mops.

Rational Floor Cleaning is an efficient cleaning method that produces a professional and cleaner result – more quickly and at a lower price. It is the best way to deal with dirt, dust and microparticles.

Relief for the staff's arms, shoulders, backs and skin

Staff gain through Rational Floor Cleaning on account of:

- No heavy lifting
- Avoiding contact with solvents, cleaning agents and impregnation products.
- The fact that washing the mops in-house provides full control over your work, which is an important factor for stimulating well-being and a good working environment!

Mop washing machine + mop head + automatic dosing of washing detergent

This is the very core of Rational Floor Cleaning.

Rational Floor Cleaning – so easy that everyone can handle it

Place used mop head in the machine.

Press start. When the programme finishes, the mops are ready to use again.

Minimizes cleaning time

The prepared mops make it simple to sweep up dust and dirt. The result is cleaner, and it is not necessary to clean as often.

Cleaning with moist or dry mops is the best way to deal with dirt, dust and micro-particles

For dry mop heads, use our mop washing machines with a high-speed spin cycle, backed by one of our efficient tumble dryers. Naturally, you can also choose to work with a combination of both cleaning methods: dry and moist mopping.

We take responsibility for our products long after installation

Our machines are built to function in tough environments year after year, and as extra security, we offer Full Service Agreements on all our products. These agreements include an annual maintenance visit as well as complete responsibility for parts and repairs, which minimizes the total cost and extends both service life and uptime.

Cleaning trolleys with heavy water containers, cloths and soaking swabs are history

Traditional floor cleaning

Major stresses and strains on staff's arms, shoulders, backs and skin

Cleaning staff are often subjected to major stresses and strains, such as heavy lifting and contact with solvents, cleaning agents and impregnation products.

This often results in absence due to illness and high staff turnover.

Rational Floor Cleaning

Rational Floor Cleaning

What the method involves:

1. Take the clean heads out of the machine. They are prepared and ready to use directly.
2. Take the mop heads to the cleaning site and use them to sweep up dirt, dust and gravel quickly and easily. This will leave the area cleaner than other cleaning methods, and it will stay that way longer.
 - No heavy lifting of water containers.
 - No tiresome wringing of cloths.
 - No contact with chemicals.
3. Put the used mop heads in the mop washing machine. Start the machine. The mop heads will be washed clean and prepared for the next cleaning assignment.
 - For moist mopping, take the heads out of the washing machine and use them straight away.
 - For dry mopping, put the heads in the tumble dryer and dry them before use.

Tailor-made programmes and machines specially designed for the cleaning sector's different needs

Our professional laundry equipment offers large capacities and long service lives

The mop heads can generally withstand thousands of washes, and this new cleaning method soon turns into a real money-saver. Of course, we will be happy to perform a cost calculation on the basis of your actual needs – and we promise that you will be in for a pleasant surprise!

Prepared for the connection of external dosing equipment

All our mop washing machines can work with both liquid detergent and washing powder, and they are also prepared for the connection of external dosing equipment. Liquid detergent pumped directly into the machine ensures the right dose at the right time, wash after wash. Minimizes costs and environmental impact.

Let us turn your own cleaning operation into a success story

Wash in-house!

Washing mops in-house involves special requirements on equipment and processes. No matter how large or small your company may be, washing mops in-house will pay dividends in almost all cases.

Tailor-made programmes and machines specially designed for the cleaning sector

With the right equipment, cleaning work can be quickly and simply adapted to suit your needs.

- Our mop laundry programme is adapted to suit the various systems recommended by cleaning material suppliers.
- Our machines are built to withstand intensive use for year after year.
- Our mop washing machines are fitted with Compass Control™, which is programmable.

We know that our machines work, and we have extensive experience from washing mops for a variety of companies pursuing different activities. You can trust us. Now and in the future.

What are your cleaning requirements?

We have a range of machines with our special mop washing programme. And those shown here are just a selection. The most applicable type of machine or combination depends on your current cleaning needs.

Moist mopping

If you focus exclusively on cleaning with damp mops, our normal-spin washing machines are the right choice. However, you can of course also choose one of our fast-spin machines so that you can also process other types of laundry.

W455H Mop

W475N Mop

W4130H CL Mop

Dry mopping

If you prefer dry mops, or want to work with a combination of both cleaning methods, we recommend that you choose a fast-spin washing machine in combination with an efficient tumble dryer.
